"Your workshop helped us prioritise our challenges and capitalise on where we can win as a commercial team. We've already started making changes."

Grace Herbert-Lo, Commercial Partnerships, Unibail Rodamco Westfield

"Your presentation had people talking for days. My team have updated our L&D plans based on your recommendations."

Ryan McCarthy, Head of Learning and Development, Macquarie Bank

### Short bio:

**I help organisations prepare and create their positive futures**

Matt O'Neill is a respected international speaker and accomplished author. With a background in leading successful marketing and communications ventures, he now focuses on guiding business executives through today's complex landscape of uncertainty, with particular expertise in The Future of Work, Leadership, and Technology.

## Becoming Superhuman: A revolution in productivity and happiness!

On one hand, radical new tools like AI promise a revolution in productivity and creativity. On the other, teams are fearful of constant change. Imagine a world where you can harness the power of AI to skyrocket productivity and creativity, while also providing your team with the skills and flexibility they crave. We can have it all.

"Becoming Superhuman" is a cutting-edge workshop that will change the game for you and your team.

Discover the latest technology and future-ready life hacks that will transform your business and help you become exponentially more productive and happier too, all with less effort.

Designed for **entrepreneurs, CEOs, HR leaders, and CXO** leaders who are interested in human-machine teaming, achieving more and building a 21st-century work-life balance.

**You will get:** Insights, tools, and techniques to supercharge your productivity and become future-ready for an AI enabled world.

This workshop consists of **four core sections**, each with interactive sessions designed to give participants a thorough understanding of AI and its impact on the world of work, as well as practical applications for their own work and businesses. Prior to the workshop, we will agree a detailed overview and key areas of value-add customisation.

- 1 Introducing AI** and its capabilities, history, and opportunities **customised for your group**. In the driving seat, participants will understand AI's value and fear it less.
- 2 Introducing GPT-4** (the successor to ChatGPT) and how to use it in business scenarios **customised to your needs**. Participants will learn advanced prompting techniques to unlock new value, understand its limitations, and explore its applications in their own work.
- 3 Advanced AI tools** in content creation, business, development, finance, HR, communications and marketing; again **fully customised for each workshop** based on needs. Participants will understand the AI ecosystem and how it will influence productivity in the future.
- 4 AI in your work today:** We'll develop a **personalised plan** to apply what every participant has learned. We'll develop a **synthesising mindset** (and understand why this is so critical), and learn about **'resilience 2.0'** for the modern workplace.

Participants will leave with insights, tools, and techniques to supercharge their productivity and achieve a 21st-century work-life balance.
